

TERMÉKLEÍRÁS

A speciális anyagösszetételű előre gyártott lábazati elemek anyagösszetétele: poliészter gyanta, kvarcgranulátum keveréke. Ez a monolitikus anyag azon kívül, hogy rendkívül ütésálló, egyéb számos előnnyel is rendelkezik: vegyszerálló, olyan agresszív tisztítószerrel és olyan vegyi anyagokkal szemben, mint a só, savak, vér. Könnyen tisztítható, felülete sima és nem porózus. Az egyedülálló összetétel lehetővé teszi a Salmonella, E.coli és Listeria fertőzések megelőzését. Nem utolsó sorban pedig gyorsan lehet felhelyezni a kívánt helyre.

Extra védelem a szegélyeknek

Éles tárgyak által okozott sérülésekre további megoldást jelentenek a szegélyekre vagy falakra felcsavarozott polietilén rugalmas eltartó ütközők.
